

Tin Htet Kyaw

Hands-on Engineering Leader

Millbrae, CA, USA

☎ (650) 618-8168 | ✉ tinhkyaw@alum.mit.edu | 📱 tinhkyaw | 🌐 tinhkyaw

Hands-on leader with wealth of experience in leading engineering teams and building distributed, scalable Big Data, Machine Learning systems

Experience

Lightspeed Venture Partners, Menlo Park, CA

Director of Engineering

Jan. 2019 - Present

- Leading the data platform engineering team at Lightspeed to create data solutions to power data-driven deal sourcing, diligence and portfolio support in venture capital investing
 - Building automated and scalable data infrastructure to onboard datasets, generate features, train and test machine learning models to power our various data platform functions
 - Creating internal tools to help track and analyze relationships and signals on future investment candidates and opportunities
 - Working cross-functionally with investors to improve the ability of our data models to generate useful business insights

Lyft Inc., San Francisco, CA

Staff Software Engineer, Machine Learning & Intelligence, Autonomous Vehicle Division

Jun. 2018 - Jan. 2019

- Built the machine learning pipeline for the Mapping Intelligence team in the Autonomous Vehicle Division to iterate on computer vision models to build High Definition maps

Staff Software Engineer/Engineering Lead

Aug. 2017 - May 2018

- Led a team of three engineers to rebuild Lyft's live traffic profile estimation pipeline to reduce overall latency from hours to less than 30 minutes
- Collaborated with ETA Data Science team to reduce Lyft's ETA estimation error rate by 5%

Walmart Labs, Sunnyvale, CA

Principal Software Engineer/Engineering Lead

Aug. 2016 - Apr. 2017

- Led a team of three engineers to re-architect and build the Walmart Ad Exchange (WMX) platform on Apache Spark to drive smart and responsive ad-targeting based on Walmart's unique offline+online datasets

Netflix Inc., Los Gatos, CA

Senior Software Engineer

Aug. 2014 - Jul. 2016

- Built and launched the first production grade Apache Spark based machine learning pipeline at Netflix
 - Enabled rapid development of algorithms to rank recommendations of movies and TV shows on Netflix
 - Generated recommendations daily to personalize email, app notifications and Billboard – the large banner on Netflix homepage
- Wrote the recommendation algorithm to cold-start new titles with little metadata and no play history
- Improved Billboard recommendation algorithm to balance impressions among competing titles while maximizing streaming hours

Drawbridge Inc., San Mateo, CA

First Engineer, Algorithm Engineering Manager

Jan. 2011 - Feb. 2014

- Created Drawbridge's first Device Graph to statistically connect anonymized ids of the same user across multiple devices
 - Achieved over 60% precision on a partner-provided test dataset
- Designed and built Drawbridge's batch data pipeline using Hadoop, Hive, Pig and Oozie to process billions of events in terabytes of data daily
- Managed a team of three engineers machine learning building models to:
 - Click-through rate (CTR) and conversion rate (CVR) prediction and optimization
 - Loss prevention – to flag, stop and alert for ad groups and campaigns where losses, differences between predicted and actual revenues, exceed alert thresholds
 - User behavior, demographic and geographic feature extraction and extrapolation

Announce Media Inc. (Answers.com), Mountain View, CA

Senior Software Engineer

Jun. 2010 - Dec. 2010

- Architected and launched Announce Media's first Hadoop application to parallelize, scale and automate keyword evaluation for the company's core business of search engine marketing

AdMob Inc. (acquired by Google, Inc.), San Mateo, CA

Software Engineer

May 2008 - May 2010

- Built and Maintained Unique User (UU) service, a real-time system keeping track of ad impressions and clicks per UU throughout the hyper-growth phase of the early mobile web
- Created Hadoop jobs to compute UU statistics across geographic and demographic dimensions

Yahoo! Inc., *Sunnyvale, CA*

Software Engineer

Sep. 2005 - Apr 2008

- Developed ad-serving, link-tracking, AB testing, location-based personalization and backend for core modules such as RSS, Personal Assistant, Weather, Scoreboard, Mail and TV modules to My Yahoo!

Education

Massachusetts Institute of Technology, *Cambridge, MA*

Sep. 2000 - Sep. 2005

- Master of Engineering in Electrical Engineering and Computer Science (EECS) *Sep. 2005*
- Bachelor of Science in Management Science with concentration in Finance *Jun. 2005*
- Bachelor of Science in Electrical Engineering and Computer Science (EECS) with Minor in Economics *Jun. 2004*

Skills

Select Languages & Frameworks: Java, Scala, Python, Bash, SQL, Spark, Airflow, Hadoop, Hive, PostgreSQL, AWS, Git

Communication: English, Burmese, Chinese Mandarin, Japanese (*3 years of college-level coursework*)

Patents & Awards

Method for Transmitting Information to Device on a Network Based upon Information Associated with a Different Device on the Network, *Sivaramakrishnan, K.; Guan, D.; Kyaw T.; et al. 2016.*

US 20160125461 A1

System and Method for Determining Related Digital Identities, *Sivaramakrishnan, K.; Guan, D.; Kyaw T.; et al. 2014.*

US 20140095320 A1

4th Place, *National Matriculation Examination, Ministry of Education, Republic of the Union of Myanmar*

1997
